

# CA Identity Suite

## At a Glance

CA Identity Suite delivers comprehensive identity management and access governance capabilities for business users in a unified, easy-to-use interface.

The solution provides an intuitive, self-service console that can improve business user productivity by delivering identity and entitlement data in a common business language, as well as a shopping cart experience for requesting access to new systems. CA Identity Suite also offers robust administrative features for IT users that help minimize administrative overhead and improve audit and compliance performance via centralized policy enforcement. It provides simplicity for the business user and can reduce the complexities of the IT environment. Plus, you can deploy the solution in minutes.

### Key Benefits/Results

- **One-stop shop** simplifies and centralizes access to all identity processes, optimized for business users.
- **Increase business user productivity** with easy-to-use, self-service features.
- **Reduce identity risks** with real-time policy enforcement and sophisticated entitlement analysis.
- **Increase audit and compliance efficiency** by streamlining certification and provisioning processes.
- **Very fast time-to-value** due to preconfigured use case templates and virtual appliance deployment.

### Key Features

- **Self-service identity portal** centralizes access to all identity services for business users and provides an intuitive access request shopping cart.
- **Business friendly entitlements catalog** makes entitlement certification more understandable for business people.
- **Web application launcher** provides one place for each user to go for easy access to all their applications.
- **Proactive analytics** advise, prevent and alert the business user of potential policy violations.
- **Deployment Xpress** tools help make deployment of common use cases easy and fast.

## Business Challenges

As today's organizations contend with an increasingly distributed, complex and heterogeneous IT environment, the scope of managing who has access to what must include support for more users, more apps, more entitlements and more user related data. At the same time, organizations need to demonstrate compliance with a wide variety of regulations and protect against cyber and security threats and the risk of data loss.

The result is an increased premium on identity management and governance solutions that can easily guide business users and managers through common identity-related tasks such as provisioning, entitlements certification and access requests in a common and simple user interface.

Unfortunately, many of the new identity governance solutions that were built to interact with the business users do not provide the breadth of provisioning capabilities and the scale required for an enterprise scale deployment of identity management. This can force organizations to have to choose between performance and usability.

## Solution Overview

CA Identity Suite presents an intuitive, convenient user experience, which dramatically simplifies the access request process for business users through an intuitive shopping-cart model where users can conveniently select roles and entitlements needed to perform their job duties, view current access privileges and check the status of previous requests. By taking the risk analysis and certification processes and enabling remediation actions in real time during the access provisioning steps, CA Identity Suite improves audit performance and reduces risk with preventative policy enforcement.

While providing these business and governance-centric capabilities for business users, CA Identity Suite also delivers core enterprise-grade identity management and governance capabilities, including broad provisioning support for on-premises and cloud apps, extensibility and flexibility to integrate with other IT systems and consumer-grade scale. This means organizations are not forced to choose between usability and performance. With CA Identity Suite, they can have both.

## Critical Differentiators

CA Identity Suite delivers on the promise of business-enabled identity management and governance: a solution that enables business users to easily manage the identities and access of their end users. It provides comprehensive identity management and governance capabilities with a simple, intuitive user experience. This user experience can dramatically simplify processes such as user access requests and access certifications, resulting in improved productivity and user satisfaction. In addition, a business entitlements catalog simplifies access requests and certification campaigns because it uses terms that business users understand.

CA Identity Suite includes embedded analytics to enable administrators to drill down into existing identity processes, such as lifecycle management, in order to identify areas of process inefficiency and meet service level agreements. In addition, CA Identity Suite simplifies deployment and management through the use of a set of predefined user scenarios so that interfaces, workflows, and processes can be easily created from these templates (Deployment Xpress). In addition, a Virtual Appliance feature reduces deployment time from days to literally minutes.

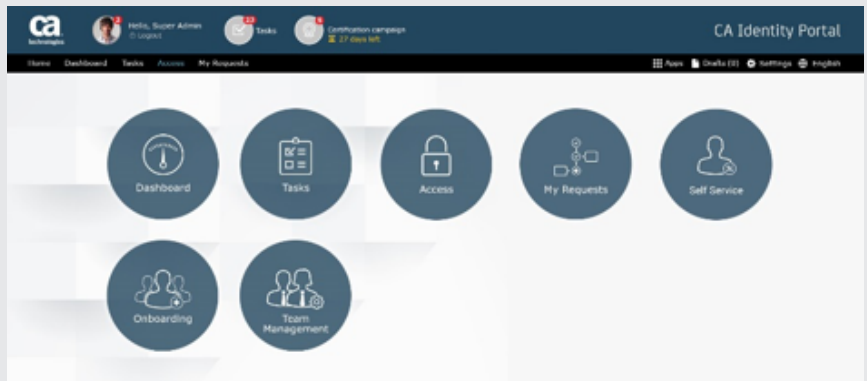

When used with CA Privileged Access Manager, CA Identity Suite provides full governance of privileged user access—a unique capability from a single vendor.

CA Identity Suite delivers a simple, business-oriented interface for key identity functions, helping to bridge the divide between current IAM technologies and business users.

The CA Identity Suite User Experience

CA supports a complete approach to identity management and governance by supplementing technology with comprehensive services and educational offerings. CA Technologies has the experience and proven methodologies needed to help you implement identity management in a way that delivers rapid results, now and in the future.

CA Technologies (NASDAQ: CA) creates software that fuels transformation for companies and enables them to seize the opportunities of the application economy. Software is at the heart of every business, in every industry. From planning to development to management and security, CA is working with companies worldwide to change the way we live, transact and communicate—across mobile, private and public cloud, distributed and mainframe environments.
